University of Illinois College of Veterinary Medicine

Standard 9 – Curriculum
Minor Deficiency:
The curriculum as a whole must be reviewed at least every seven (7) years. The curriculum must provide:
c. instruction in both the theory and practice of medicine and surgery applicable to a broad range of species. The instruction must include principles and hands-on experiences in physical and laboratory diagnostic methods and interpretation (including diagnostic imaging, diagnostic pathology, and necropsy), disease prevention, biosecurity, therapeutic intervention (including surgery), and patient management and care (including intensive care, emergency medicine and isolation procedures) involving clinical diseases of individual animals and populations

Standard 11 – Outcomes Assessment
Minor Deficiency:
The college should have in place a system to gather outcomes data on recent graduates to ensure that the competencies and learning objectives in the program result in relevant entry level competencies.

Outcomes of the veterinary medical degree program must be measured, analyzed, and considered to improve the program.
