

Statement of Support for the Veterinary Medicine Mobility Act of 2013

The undersigned organizations urge Congress to pass the **Veterinary Medicine Mobility Act of 2013**, which is being championed by U.S. Representative Kurt Schrader (D-OR-5).

The legislation amends the Controlled Substances Act (CSA) to allow veterinarians to transport, administer and dispense controlled substances outside of their registered locations.

The practice of veterinary medicine is unique in that veterinarians treat multiple species of animals in a wide variety of settings. To adequately practice medicine, veterinarians are often required to provide mobile or ambulatory services in the field. This is particularly important in rural areas and for the care of large animals because it is often not feasible, practical or possible for owners to bring their livestock (i.e., cows, pigs, horses, sheep, and goats) to a brick-and-mortar clinic or hospital. Also, many companion animal veterinarians provide "house call" services for their patients or may operate mobile spay and neuter veterinary clinics. In addition, some veterinarians throughout the course of their daily duties may use controlled substances to remove or translocate dangerous wildlife (e.g. bears, cougars); to rescue trapped wildlife (e.g. deer trapped in a fence); or in research and disease control efforts.

The Drug Enforcement Administration's (DEA) interpretation of provisions within the Controlled Substances Act and resulting federal regulations make it illegal for veterinary registrants to transport controlled substances for use outside of their registered locations. The DEA has informed organized veterinary medical associations that transporting controlled substances is illegal per the CSA and thus the Administration requires that a statutory change be made that will allow veterinarians to legally provide complete veterinary care in situations such as the ones described above.

By passing the Veterinary Medicine Mobility Act, Congress will ensure that veterinarians are able to provide proper care for their patients. The ability to be mobile is imperative for veterinarians to meet the health and welfare needs of the animals that they treat as well as to safeguard public safety and the nation's food supply.

Sincerely,
