

The Council has proposed the following revisions for Standard 11, Outcomes Assessment (**additions** underscored, deletions ~~struck~~):

Standard 11, Outcomes Assessment

Outcomes of the veterinary medical degree program must be measured, analyzed, and considered to improve the program. New graduates must have the basic scientific knowledge, skills, and values to provide entry-level health care, independently, at the time of graduation. Student achievement must be included in outcome assessment. Processes must be in place to remediate students who do not demonstrate competence in one or more of the nine competencies.

The college should have in place a system to gather outcomes data on recent graduates to ensure that the competencies and learning objectives in the program result in relevant entry level competencies.

The school/college must have processes in place whereby students/graduates are observed and assessed formatively and summatively, with timely documentation to assure accuracy of the assessment, performing each of the following competencies:

1. comprehensive patient diagnosis (problem solving skills), appropriate use of clinical laboratory testing, and record management
2. comprehensive treatment planning including patient referral when indicated
3. anesthesia and pain management, patient welfare
4. basic surgery skills, experience, and case management
5. basic medicine skills, experience and case management
6. emergency and intensive care case management
7. health promotion, disease prevention/biosecurity, zoonosis, and food safety
8. client communications and ethical conduct
9. critical analysis of new information and research findings relevant to veterinary medicine

The Council on Education expects that 80% or more of each college's graduating senior students sitting for the NAVLE will have passed at the time of graduation. *

**Colleges that do not meet this criterion will be subjected to the following analysis. The Council will calculate a 95% exact binomial confidence interval for the NAVLE scores for colleges whose NAVLE pass rate falls below 80%. Colleges with an upper limit of an exact 95% binomial confidence interval less than 85% for two successive years in which scores are available will be placed on Probationary Accreditation. Colleges with an upper limit of an exact 95% binomial confidence level less than 85% for four successive years in which scores are available will, for cause, be placed on Terminal Accreditation. If no program graduates take the NAVLE, the Council will use all other student educational outcomes in assessing compliance with the standard including those listed in 12.11.1.*
